

CARE HOME WASTE MANAGEMENT

The 5 Ways Care Homes Overpay On Waste

Small waste mistakes quietly add thousands to a care home's annual bill. The problem is rarely volume — it's how waste is classified, tracked, and contracted.

If any of these apply to your home, there is likely recoverable cost sitting in your current waste spend — without changing your service provider.

1 Clinical Waste Misclassification

£3–£8 per kg

Costs £3–£8 per kg — most misclassified waste should be going into cheaper streams.

2 Food Waste In General Bins

£60–£120 per bin/yr

Separate food waste saves £60–£120 per 1,100L bin per year — and keeps you compliant with duty-of-care requirements.

3 Unchecked Contractor Rates

15–25% above tender

Out-of-contract rates typically run 15–25% above tender pricing. Most care homes haven't benchmarked in over 2 years.

4 Missing Waste Transfer Notes

Regulatory exposure

The absence of records creates a paper trail gap — every non-hazardous transfer should be covered by proper waste transfer documentation.

5 No Documented Waste Policy

CQC Well-led risk

A written waste management policy is expected under CQC's Well-led domain. Most homes don't have one.
